

# THIS EVIL INVASION BROUGHT TO YOU BY THE EVIL ENVIRONMENTALISTS

<https://www.2thepointnews.com/this-evil-invasion-brought-to-you-by-the-evil-environmentalists/>

For more than 40 years, the

environmentalist movement has been warning that global warming is the result of mankind's burning of fossil fuels and poses an "existential threat" to human and other biological life.

This is one of the many grandiose lies the Left uses to reshape, if not destroy, Western civilization.

Other grandiose lies used to achieve that result include America being systemically racist; that violent crime is the result of racism and poverty; men give birth; sex and gender are "nonbinary"; and that former President Donald Trump was a Russian asset.

It should now be obvious that the "Greens," the environmentalist movement—not global warming—poses an existential threat to humanity.

For the first time since the Cuban missile crisis of 1962, the world faces the possibility of a nuclear war. Russia is explicitly threatening use of nuclear weapons should the West come to the defense of Ukraine and has put its military on nuclear alert.

Given the possibility that Russian President Vladimir Putin is deranged, the threat is far more real than it was in 1962 when Nikita Khrushchev was the leader of the Soviet Union. Putin believes he embodies Russia (just as Hitler believed he embodied Germany). Khrushchev did not believe he embodied Russia.

Were it not for the green movement, Putin would not have been confident that he could get away with invading Ukraine. Main reason? During Trump's presidency, and due to his policies, the United States became independent of foreign oil for the first time.

Immediately, starting within minutes of Biden's inauguration by his killing the Keystone Pipeline, the Democrat Party, an extension of the environmentalist movement, forced America to revert to dependence on foreign oil, including Russian oil.

Beholden to the environmentalists, Biden curtailed oil and gas production: no new fracking on government land, no drilling in the Alaskan Arctic, and even pressuring banks to stop lending to frackers.

Putin got the message.

So, thanks to environmentalists, not only is America once again dependent on foreign oil, Germany is dependent on Russian oil.

Angela Merkel, another in a long line of foolish Germans, even shut down Germany's nuclear reactor—which the greens in Germany applauded. They applauded it—despite the fact that nuclear energy is the only viable non-carbon energy that can sustain a country—because the environmentalist movement is not nearly as interested in the environment as it is in restructuring society.

*For the truth is: The environmentalist movement is as interested in protecting the environment as the communist movement was in protecting workers or the defund-the-police movement is in protecting blacks.*

The Democrats came into power in January 2021. The average closing price of oil in December 2020 was \$39.68 a barrel; the closing price of oil in 2019 was \$56.99 a barrel. As of this writing, it is \$138 a barrel.

The extremely high price of energy—a direct result of the environmentalist policies of the Democrat Party and the liberal and Left parties in Europe—is one of the two primary reasons for the ever-increasing rate of inflation. (The other reason is the result of another Democrat Party policy: the printing of *trillions* of dollars.)

And any day now, the Biden administration will announce an agreement with Iran that will enable Iran to take in billions of dollars for its oil. Yet another victory for Biden, the Democrats, and the environmentalists. This agreement, brokered—incredibly—by Russian diplomats, will enable Iran to sponsor worldwide terror, resuscitate Iran's economy, and continue its quest for nuclear bombs.

(To understand just how terrifyingly bad this Biden-Iran agreement is, read *This Is Not Obama's Iran Deal – It's Much, Much Worse* by Gabriel Noronha, SecState Pompeo's Special Advisor on Iran.)

But none of this matters to Biden, the Democrat Party, the *New York Times*, or any other left-wing institution—so strong is the grip of the environmentalist cult and so influential are the uber-wealthy environmentalists who support the Left.

They would rather see Ukraine destroyed, the potential for a nuclear war, and the decimation of the world economy than allow fracking, drilling, or even an oil pipeline between Canada and the United States.

Concern for the environment is a good thing, but the environmentalist movement is not.

Environmentalists use the environment to create a social revolution just as communists used workers to create a social revolution.

Its activists are fanatics.

Its consequences are nihilism.

Environmentalists are, intentionally or not, in collusion with Putin to undermine America and the West.
